for the medical institutions

Telemedicine

Healthcare practitioners have access to the full range of patient information, collaborative tools and information from the other departments in real time right from the workplace:

- ❖ The system provides transparent control from prescription all the way to pharmacy
- ❖ The system guarantees the availability of requested medications in stock and optimizes medical logistics
- ❖ The system allows to control the schedule of medical procedures
- ❖ The results of analyses are automatically uploaded to the electronic medical card
- ❖ The results of the medical trials can be verified against MRT snapshots and video
- ❖ This system ensures let the management and this staff of medical institution use the most cutting edge standards of medical assistance and disease diagnostic
- ❖ The owner of the clinical center (the state) controls the profitability of medical services

advantages

# The unified working environment

Creation of the unified working environment for the medical institutions

We are able to create unified center where the Russian healthcare practitioners perform remote checkup assistance, monitoring and supervision of rehabilitation procedures, while the patients are placed in hospitals and clinics in the other country

## advantages

**The system ensures consistency of medical documentation and access to the medical health records in English, Russian and Arabic languages**

**Healthcare professionals will be able to remotely monitor prescriptions and activities**

**A patient has access to actual, complete and verified information on available medical centers, their products and services available**

**Economy gets additional revenue streams**

Telemedicine helps attract more customers who want to get a high quality service without a need to move locally or internationally

The technology enables remote assistance from qualified Russian medical professionals, while dealing with a certain clinical case or a patient. Being implemented, telemedicine allows for a much broader coverage and range of medical services:

## advantages

**Commercial and private practice, vending of medications**

**Significant increase in availability of a high quality medical service to all strata of population**

**Training of the field staff**

**Creation and maintenance of communication channels with acknowledged and unique Russian clinics**
